PULTRUSIONS**

Manufacturer of Engineered FRP Pultrusions

“ Manufacturer of
Quality Engineered Structural Pultrusions
For Over **40** Years ”

Structural Fiberglass Pultrusions

Polyglas Structural Pultrusions are a combination of fiberglass reinforcements and thermo-setting polyester or vinyl ester resin systems. All of our structural composites include a surface veil to protect against fiber blooming. It also increases the composites useable life cycle, corrosion resistance and ultraviolet resistance.

Polyglas Structural Pultrusions are offered in three standard systems:

Polyglas 'F' - General purpose composite manufactured in a fire retardant isophthalic polyester resin system. Standard colors are gray and hazard yellow.

Polyglas 'C' - A superior grade composite manufactured in a fire retardant and highly corrosion resistant vinyl ester resin system. Standard color is beige.

Polyglas 'M' - General purpose composite manufactured with a non-fire retardant isophthalic polyester resin system. Standard color is olive green.

Structural Fiberglass Products include:

Channels, Flat Sheets, Angles, Tubes, Rods, Beams, Plates, Bars
